Executive Summary

DryClean Tablets is a waterless laundry cleaning product that has the potential to change the vision of the sector with its reformist nature. The market plan provides integrated information and analysis of the product and the market. The general branding purpose of DryClean tablets is to create value with an eco-friendly approach and gain the support of the public. Potential segmentation, positioning, and targeting strategies that support the branding purposes are provided in the report. The plan can be considered as a guide designed to optimize the realization process of the product's entry into the market.

DryClean Tablets' uniqueness and vision come from enabling washing laundry without using water. The holistic design of the product is careful towards human health, energy consumption, economic situations, and most importantly nature. The product brings technology to the laundry cleaning market, which can already be considered old-fashioned.

Potential customers are segmented into categories for better marketing. For B2C, the segmentation groups are based on their demographic backgrounds, psychological natures, and behaviors. Younger generations without strict purchasing behavior and caring for the environment are the main targets. Customer's attention to traditional habits will be taken by the cleaning features of the product. In addition, great interest is expected in the B2B category since government facilities like hospitals and the accommodation sector will be willing to benefit from the practicality of the product and contribute to their eco-friendly brand promotion. An integrated marketing communication plan is provided in the report for these segments.

Public relations and advertisements play a crucial role in highlighting the ecological responsibility of the company. Customers with environmental priorities will raise awareness and more probably purchase the product. Customers considering DryClean Tablet as a convenience product and showing less effort in choosing should be targeted with the time-saving feature. Partnership with urban retail outlets can be a suitable strategy. For customers with strong consuming habits, it is necessary to make tailored presentations. Also, educating the consumer about the usage can break down prejudices.

For businesses interested in the product, financial advantages are important. Government facilities like hospitals use a great amount of water when cleaning their laundry. The marketing efforts will be focused on cost savings and will be supported by industry case studies. Also, private sector companies will be interested in strengthening their reputation. Eco-friendly washing without wasting water will contribute to the user's value. These strategic approaches are tailored for optimal transition from segmentation to targeting.

With the vision to innovate a socially responsible product using the opportunities of technology, DryClean tablets represent the future of the industry. Since the first in its category, there is a great area for improvement both with the product and the market. The estimated product life is long and the maturity state can be profitable for a long term. With an unrelenting commitment to create value in the market, DryClean Tablets will be the leader for an eco-friendly transformation. The segmented targeting will enable customized and caring service, which will create initial mass awareness.

Introduction

DryClean laundry tablets embody freshness, knowledge and environmental friendliness when it comes to laundry. The need for a new way to do laundry that is both eco-friendly and effective was recognised. During planning meetings, various situations were discussed where conventional methods were insufficient or harmful to the environment, such as in arid countries where conventional methods are not feasible. This is how the idea for DryClean tablets was born, which aims to address these challenges and redefine laundry by eliminating the use of water. These tablets do not use water, and minimize detergent usage, therefore safe for clothes and machines, while protecting the environment. This makes the product more sustainable, as this brilliant innovation minimizes groundwater pollution and detergent waste.

The motivation behind the DryClean Tablet is a commitment to making a positive impact on society and the environment. The development process involved a holistic product design approach using multiple technology options as well as ongoing prototyping and user feedback. Inspired by nature and sustainable design principles, the DryClean Tablet aims to help individuals and communities by providing an environmentally friendly way to wash clothes. Research into consumer demographics and behavior revealed key insights into the target market. The survey results show that a primarily young population (18-24 years old) shows strong interest in new cleaning solutions, including many well-educated women. The most important factors influencing purchasing decisions are pricing, cleaning effect, smell, environmental friendliness and ease of use. While many respondents are satisfied with existing cleaning products, 82% are willing to try DryClean tablets thanks to desired features the tablet provides. This suggests the need for a solid distribution strategy, as consumers prefer shopping in supermarkets or online retailers, mainly for convenience. The strong tendency to recommend the product also indicates great word-of-mouth marketing potential.

Method

For an accurate marketing strategy, the marketing information environment must be benefited. In that sense, primary and secondary research should be conducted. These research contribute to understanding the microenvironment and the macroenvironment. The holistic understanding and interpreting via reliable information is key to success.

The secondary research is done by categorization. To understand the macroenvironment, the research included cultural, economical, demographical, political, and environmental aspects. The microenvironmental research includes the main categories of supplier, public, finance, company and market intermediaries. The research is conducted by getting knowledge about the laundry cleaning sector, industry trends and understanding consumer purchase behaviors. Academic sources and trustworthy websites are used during the process for accurate results. Also, reports related to case studies are carefully examined. Technological developments are followed to determine the capacity of our product.

The primary research is done by contacting directly with the potential customers. The questionnaire format is used because options made categorization and analysis of the data easier. Also, this way made it easier to reach the potential customers and make them attend the research. An online link is created and sent to various people from different backgrounds. For better understanding of the questions, a Turkish questionnaire is preferred. The questions first aim to understand the demıgraphic ground by asking them their age, income and living style. This done for practical segmentation. Then questions about the preferences of potential customers were asked to understand their priorities. Diverse range of attendees enabled detailed data gathering. A total of nearly 60 responds were gathered and detailedly analyzed in the following. Both quantitative and qualitative information is reached. The future of the company is designed depending on this data.

Secondary Research

Cultural Analysis

In marketing strategies, DryClean Tablets can bank on the cultural values associated with environmental sustainability. The growing importance of saving water and avoiding the environmental burden align with the existing cultural change that flutters toward more environmentally friendly solutions. Thus, the features and benefits can be showcased that the tablets cleans the clothes without water usage and value to the environmentally concerned consumer who cares for sustainable living practices.

In high-context cultures where technological changes are highly valued, even in the case of household appliances, DryClean Tablets could be marketed as a highly technological substitute for traditional laundry detergents. Especially since the tablets are powered by the innovative mixture of enzymes, biodegradable solvents, and surfactants, it can bring attention from technically inclined consumers who are looking for new and effective solutions for old and tedious problems, including laundry.

With cultural consumption becoming more about convenience and urbanization, DryClean Tablets give a very practical product, especially for singles and families on the run. The small, easy-to-handle tablets fit well with modern lifestyles that emphasize efficiency and effectiveness through ease of use. This can be marketed effectively by emphasizing how the tablets simplify laundry routines and reduce storage space compared to bulky liquid detergents.

Variability in the scent names (Lavender Breeze, Mountain Fresh, Ocean Mist) caters to different cultural preferences or regional tastes of different scents. Knowing and catering to local scent preferences can increase product acceptance and appeal across different backgrounds of culture.

Opportunities:

- **Environmental Awareness:** DryClean Tablets can capitalize on the increasing global awareness of environmental issues and promote their water-saving benefits.
- **Technological Appeal:** Leveraging technological innovations in household products can attract tech-savvy consumers seeking modern solutions.

- **Urbanization Trends:** Addressing the needs of urban consumers with convenient and space-saving products can expand market reach.

Threats:

- **Cultural Adaptation:** Adapting the product to diverse cultural preferences and consumer behaviors, especially in regions with varying laundry habits, could pose a challenge.
- **Competitive Landscape:** Potential competition from established detergent brands or alternative eco-friendly products may affect market penetration.

Economic Analysis

DryClean Tablets can tap into these shifts in consumer behavior where eco-friendly and convenience products are taking precedence. Enhanced consumer education about environmental sustainability has led to an increase in the demand for products such as DryClean Tablets, aimed at curbing usage and the attendant environmental impact. Such understanding of the consumers is bound to drive market penetration and adoption.

A cost-benefit analysis can be done to position DryClean Tablets effectively in the market. For example, it could be easily justified that the higher price per tablet in comparison with traditional detergents is covered by long-term savings due to the reduction of water and energy consumption and an increase in convenience of use. This strategy would bode well for customers looking for effective, yet cost-effective solutions for their household routine. The incorporation of environmentally friendly purchasing habits can greatly affect household finances and personal budgets. Although certain environmentally-friendly items might cost more upfront, the possible future savings can balance out these expenses and enhance overall financial health. [1]

In this regard, it becomes very important to optimize the structure of the supply chain of DryClean Tablets in order to manage the costs of production and the policies on pricing. The competitive

[1] Tan Wen, *Green Spending: How Eco-Friendly Consumption Impacts Personal Finances*, 2024, https://doi.org/10.13140/RG.2.2.36494.16968.

price, profitability, and scalability are achieved with streamlined manufacturing processes, sourcing sustainable materials, and efficient distribution channels.

This can be supportive of exploring investment and funding opportunities for growing and expanding DryClean Tablets. Such investment from venture capitalists, green funds, or government grants based on sustainable innovations would give financial resources to scale production, expand marketing efforts, or enter new markets.

Positioning DryClean Tablets as a contributor to local economies through the job creation it provides within manufacturing, distribution, and retail sectors can enhance its appeal. Touting the product's facilitation of green jobs and sustainable economic development will resonate positively with stakeholders and consumers alike.

Opportunities:

- **Partnerships with Environmental Initiatives:** Collaborating with environmental organizations or joining eco-certification programs can boost the credibility and marketability of DryClean Tablets as an environmentally friendly product. Diversifying revenue streams and expanding market share beyond residential consumers can be achieved by targeting commercial sectors such as hotels, laundromats, and institutional facilities.
- **Expansion into Commercial Markets:** Focusing on industries like hotels, laundromats, and institutional facilities can broaden sources of income and expand market presence beyond just residential customers.

Threats:

- **Competitive Landscape:** Competition from well-known detergent brands entering the eco-friendly market or new competitors offering cheaper options can hinder market expansion.

- **Regulatory Compliance:** Following strict environmental rules and certifications for biodegradability, safety, and labeling might lead to higher operational expenses and regulatory challenges.
- **Economic Uncertainty**: Economic downturns or changes in consumer spending trends can influence the buying of eco-friendly products, which may affect the demand for DryClean Tablets.

Demographic Analysis

Turkey has a large and youthful population, with more than 84 million people in 2023. The population is growing at an increasing rate, giving the country one of the highest population growth rates in comparison to most nations in Europe. This means that the market is relatively huge for goods and products produced by DryClean Tablets, which require high innovativeness.[2]

The population is youthful, with lots of youths characterizing the Turkey demographic. About 25% are below 15 years old, with around 15% belonging to the 15-24 age bracket. This demographic is quite young and thus more responsive to new technologies, as well as more environmentally friendly products.[3]

In the case of Turkey, it experienced quick urbanization; over 75% of the population now resides in urban centers. Cities such as Istanbul, Ankara, and Izmir have high concentrations of population and thus are characterized by higher disposable incomes and a greater awareness regarding environmental issues.[4]

In the majority of the people with access to higher educational levels, the literacy rate in Turkey is high. More educated people tend to be aware and willing to adopt sustainable practices.[5]

The country has experienced growth in female labor force participation. However, the household chores are still traditionally defined, and women do most of the household work, like laundry.[6]

Opportunities:

- **Large Market Size:** A substantial customer base, particularly among younger consumers, provides vast market potential.
- **Urbanization:** Targeting urban consumers who value convenience and sustainability can drive adoption.

Threats:

- **Price Sensitivity:** Younger consumers may be price-sensitive, potentially hindering adoption if the tablets are priced higher than traditional products.

Political Analysis

Governments, especially the European countries, enforce strict policies related to environmental concerns. Future policies may include even stricter criteria for washing machines. DryClean Tablets can indirectly benefit from any future restrictions on traditional washing machines since it provides a totally different alternative. Direct subsidization can be provided from countries that are committed to reduce the usage of water. Additionally, such encouragement on new eco-friendly technologies can simplify the regulations on import and export of related products. There are also ecofriendly public awareness campaigns led by the governments. An example is “Water is Life” campaign in Turkey supported by both by public institutions and private sector. Such campaigns are natural supporters of DryClean Tablets. Such countries having stable government policies provide political stability and secure investment climate for the product.

Since DryClean Tablets are designed for removal of water usage, the product will not be subjected to restrictions related to consumption of water. European Union’s Ecodesign Directive and Energy Labelling regulations are strictly controlling the production and design of the products consuming water, and the regulation presents challenges to companies. There are also some inclusive regulations in all environmental issues. An example is the Paris Agreement. It ensures that the product meets environmental standards, despite the absence of specific restrictions on water use.

Public opinion is crucial for buzz marketing. DryClean can benefit from strong community and non-governmental organizations because of its role and purpose in water conservation. Strong advocacy can lead to both political actions supporting waterless washing and increase in demand because of the environmental issues. Water Innovation Accelerator (WIA) is an example platform that supports funding and mentoring startups with innovative solutions for water conservation and management.

Opportunities

- **Future Market Dominance:** In the future waterless washing products can be dominant in the market and DryClean Tablets may be pioneer.
- **Government Support**: Future bans on water consuming washing machines will indirectly benefit the product.

Threats

- **Political Unstability:** Politically unstable regions may withdraw their support

Environmental Analysis

DryClean Tablets aims to eliminate water usage for daily laundry. The utilization of biodegradable particles shows the eco-friendly aspect of DryClean Tablets. The particles and solvents used in the tablets are obtained from renewable resources and cause no chemical damage in terms of pollution risk.

The main point of biodegradability is to lower the pollution caused by detergents. Natural disasters are inevitable because of the diffusion of toxic surfactants in detergents with water and soil[7]. The organic compounds in DryClean tablets eliminate the toxicity. The plant-derived surfactants and enzymes dissolve the stain and produce eco-friendly waste in the end.

[7] EU ecolabel for detergents and cleaning products, 2020, https://eu-ecolabel.de/fileadmin/user_upload/Documents/PG006-039_7PG_/Mehrere_PG/DETERGENTS_User_Manual_V1.3_March_2020.pdf.

The non-biodegradable detergents may result in health problems for both consumers and producers during production time. Organic enzymes and surfactants reduce the risk of health problems.[8] With its components, DryClean Tablets prevent allergic reactions and protect skin health.

The elimination of water during daily laundries would decrease water use. Hence, washing machine water consumption per house is ruled out, which protects a great amount of water as a resource. Preserving water resources prevents possible natural disasters and postpones scarcity.

Opportunities

- **Recycling Packaging:** Biodegradable surfactants and enzymes lead to recycling packaging, producing packages for various products and companies
- **Consumer Awareness:** Increase in consumer awareness of pollution, increase in demand for DryClean Tablets
- **Government Collaboration:** Governments having problems with water resources may collaborate with DryClean tablets

Threats

- **Cleaning Efficacy:** The organic surfactants may not clean the stain of an unusual kind
- **Traditional Preferences:** Traditional methods would be preferred over the risk of pollution when the awareness by consumers is not reached up to the expected point

Suppliers Analysis

Suppliers play an important role in the product development, manufacturing, and overall success of DryClean Tablets. They influence quite a number of aspects: quality, sustainability, cost, and competitiveness within the market. The quality and performance of the product are heavily influenced by raw material suppliers.

Enzymes were sourced from Novozymes, DuPont, BASF, to source stain removal functionalities. Biodegradable solvents from Corbion and ADM—these firms guarantee eco-friendly ability of

[8] Divya Bajpai, Laundry detergents: An overview, 2007, https://www.jstage.jst.go.jp/article/jos/56/7/56_7_327/_pdf.

DryClean Tablets. Surfactants come in from BASF, Croda International, Stepan Company, among others—enhancing cleaning performance through surface tension reduction while aiding in dirt and grime removal. Eco-friendly packaging from Tetra Pak, Eco-Products, Amcor helps in product protection and attracts environmentally conscious consumers. The sensory stimulation is made complete with the use of fragrances from Givaudan, Firmenich, and International Flavors & Fragrances (IFF), and it contributes to customer satisfaction and brand loyalty.

Suppliers with the best sustainability practices make DryClean Tablets greener. Sourcing biodegradable solvents and nontoxic surfactants would be in line with the ecological trends in the market, appealing to that group of consumers who are sensitive to the environment, and it ensures that regulations are adhered to. This further shortens the waste for sustainable product consumption by the customers.

In most cases, DryClean Tablets utilize cost-plus pricing as a cost and price strategy, where the cost of the raw materials and components determines cost price largely. Competitive prices from suppliers are thus a necessity to secure an effective way of production cost and product competitiveness. Even though at some point, the cost of packaging is higher for eco-friendly products, an optimal balance should be established with the retail price in order to still make a profit without compromising the environmental value. It is possible to reduce long-term production costs by investing in high-quality tablet compression equipment from Bosch Packaging Technology and GEA Group since their maintenance is minimized.

The contributors to improved competitiveness in the market are suppliers offering quality and innovation. High quality and innovative raw materials and components from reliable suppliers give DryClean Tablets a difference from that of competitors; hence, standards set are high in the market. This helps to eradicate production delays and guarantees stable supplies of product, which is paramount in building consumer confidence and ensuring continued presence in the market. Strategic sourcing, based on considerations of quality, sustainability, cost-effectiveness, and delivery reliability, will be an important determinant of success and competitiveness for DryClean Tablets.

Public Analysis

Media

The role of the media is crucial because it has a great impact on masses. Since the product is eco-friendly there will be a positive media boost. The positivity created will not only raise awareness, but also attract investors and early adopters. Also, the first state of adoption of a new product is awareness and will do it for the company. Media exposure will help create initial awareness, which is a vital step in the product adoption process.

In addition to that; via media, our company will be able to educate its consumers on using the product. Since the product is a totally new concept, some loyal customers to the traditional versions of washing may have concerns on getting to use a new product. Such media campaigns can ease the transition by providing clear instructions and demonstrations. Using social media will be very instrumental to gain the attention of the new generations. While promotion via traditional media like TV ads will be effective in promoting to older generations.

Citizen Action

To lead the citizen action, public campaigns are essential and they can be carried by the media. School programs about explaining the environmental impacts and educating the public can be helpful in increasing public advocacy. Children will be interested in the product and they can influence their family on purchasing the product.

Also, pilot programs can create great impact in the local dimensions, and the effect can expand to the globe. Types of local events like neighborhood events and community workshops will contribute to buzz marketing. A successful real-life example is Adidas events in Germany in the time of EURO 2024. They were very successful since they promoted their new products and gained positive attention in the community. The positivity spread to the globe, and Adidas is seen as a customer friendly company. One of the steps is trial when purchasing a new product. Offering DryClean Tablets the opportunity of trial firsthand, can increase the likelihood of adoption.

Finance

The financing is key to purchasing a new product. Since the product is a new innovation, higher costs related to the production process are inevitable. However, to encourage the customers to purchase the product, the initial price can be set competitively low. This strategy can help build a loyal customer base, and a lower profit margin can be kept. After the customers turn into true friends, the profit margins can be increased in the future. Support from government subsidies can be used in this process to prevent possible loss.

It is important to consider the economic impact on customers too. The product is cost efficient due to the absence of water usage. Reduced water bills will have a great impact on economically unstable countries like Argentina, where there are high rates of inflation. These kinds of financial advantages can make compelling selling points.

Company Analysis

Financial Resources

Financial resources of the company should be reliable to keep a new company functioning. In that aspect, budget allocation is important. It is important to prevent luxurious expenditure and prioritize selling, marketing and customer support. These three are very important for a new product to raise awareness. Also, taking the attention of new investors can be very critic to support the company. There can be a department specifically working on reaching out to new potential investors and convincing them into partnership.

Marketing and Sales Department

Creating awareness and convincing new customers to purchase the product is essential for such an innovation. That is why a dynamic department diversifying sales channels can be beneficial. It is important to use both online platforms and retail partnerships. Making the product more reachable can be the vision of marketing and sales departments. Marketing mix, price, product, place and promotion strategies need to be determined according to the vision of the company.

Customer Support

Ensuring customer satisfaction can contribute to loyalty of the customers. However, there is an exponential relationship between satisfaction and loyalty. That is why keeping the satisfaction at the best is very important. That is why strong and diversified customer service channels like phone support can be beneficial.

Customer feedback can be very helpful for both improvement of the product and the service provided by the company. Verbal and written surveys, product reviews and other instruments of the market information environment can be used to collect data.

Marketing Intermediaries Analysis

Wholesalers

Wholesalers are one of the great intermediaries that deliver a product to people. This business type and organizations purchase a great amount of products from manufacturers. DryClean Tablets are cleaning products as classic detergents. The wholesalers of detergent products can easily buy DryClean tablets to sell on the market. Since DryClean Tablet would be a newly produced product in the market, wholesalers would buy smaller quantities of Tablets in comparison to classic detergents. However, the possible increase in the daily use of DryClean Tablets and marketing would increase the trust of wholesalers in the manufacturer. Mutual trust carries great importance for the sustainability of Tablets in the market so that the Tablets get bulk periods of production and selling. The storage of the Tablets would be the same as the storage of detergents, which would not create an extra problem for the warehouses in terms of preservation of the product.

Distributors

Dryclean Tablets aims not to complicate the lives of both customers and intermediaries. It provides easy preservation. During the distribution, there would be no extra need but the room temperature. This also increases the efficiency of the product. The product is also packaged, and there is no risk of pouring and dispersion of toxic materials in the air. The wholesalers and customers can access Tablets as swiftly as possible with the higher condition of the product.

Retailers

Retailers have direct contact with the wholesalers and the customers. At the first phase of the selling, great retailers would not be eager to buy and sell DryClean Tablets. However, Dryclean Tablets have higher sustainability than liquid detergents and are more environmentally friendly. It is expected that the shift in the market through environment-friendly materials would increase the recognition of Tablets. Additionally, Tablets provide a competitive advantage. Selling such an environmentally friendly product that eliminates the usage of water would catch the attention of potential customers. Having the attention of customers also increases the recognition of the retailers. In comparison to liquid detergents, Tablets have a longer shelf life, therefore inventory management would be easier for the retailers.

Agents and Brokers

Agents and Brokers have information about the market competition. Changing the market trend at an eligible and accessible level is expected to catch the attention of agents and brokers. Considering the customer preferences, Dryclean tablets fulfill the expectations and also provide extra opportunities. Elimination of water usage, and saving from electricity and time are outstanding opportunities Tablets provide, which are expected to increase the competition in the market. Considering customers, wholesalers, distributors, and retailers, Tablets lower any possible risk. Low risk increases the trust in the product. The trust also increases the market access of the product, which makes it highly possible to offer higher profit to agents and brokers. Market expansion would increase the recognition and sales of the product. Having contact with the agents and brokers also helps to better understand the market and increase the efficiency of the product.

Competitive Analysis

The home care and laundry detergent industries are highly competitive with large corporations which have strong resources and high market share. Therefore, distinguishing DryClean from competitors and achieving credibility is important to establish DryClean as a strong and trustworthy alternative to traditional laundry cleaning methods. After conducting research, we have identified six big competitors that either produce traditional laundry detergents or offer non-traditional laundry cleaning products.

Close but Weak Competitors

Woolite (Reckitt)

Woolite is an American brand owned by Reckitt that offers traditional laundry detergents as well as dry care kits that do not require water to clean laundry. According to the Reckitt website, Woolite is the second-best garment care brand worldwide. Woolite places emphasis on fabric care and preserving garment quality. The brand does not particularly position the product as sustainable or water-efficient although the Dry Care kits do not require water usage, only to be tumble dried. Instead, the product is positioned as time-efficient, similar to DryClean. Woolite does not have a high market share or brand visibility as other competitors that we have identified. The brand is more successful in the US than Turkey. Therefore, we identify Woolite as a close but weak competitor.

Dryel (Summit Brands)

Dryel is a brand owned by Summit Brands that offers dry cleaning solutions. The brand is positioned as a cost-effective and time-saving option. The brand places emphasis on convenience similar to DryClean, however Dryel is not positioned as a sustainable and water-saving alternative to traditional laundry cleaning methods. The product is also mostly used for spot cleaning and not cleaning whole loads of laundry unlike what DryClean offers. Additionally, the brand is only sold in the US and not in Turkey. Therefore, Dryel is a direct and close, but weak competitor for DryClean since it is not sold in Turkey and is not a global brand.

Ecoegg

Ecoegg is a company that offers non-traditional laundry cleaning solutions with an emphasis on skin sensitivity, sustainability, and eco-consciousness. Ecoegg provides an alternative to traditional laundry detergents that reduces the use of plastic through the refillable egg. The brand positions itself as an energy- and cost-efficient alternative that is gentle on the skin. Although Ecoegg requires water usage, the brand is similar to DryClean in terms of eco-consciousness and positioning itself as an alternative to traditional laundry cleaning options. The company's main sales are in the UK, as only stores located in the UK sell the product and the only other channel for international consumers is through their website. We have identified Ecoegg as a close but

weak competitor of DryClean as the company is not as successful or multinational like some of our competitors.

Distant but Strong Competitor

Ariel (P&G)

Ariel is a laundry detergent brand by P&G, which is a multinational consumer goods corporation with a wide range of health, personal care, hygiene, and cleaning products. Ariel offers traditional laundry detergents with an emphasis on innovation. The brand does not particularly emphasize water- and energy-efficiency like DryClean, which makes our product distinguishable in the face of the positive word-of-mouth that Ariel has obtained. Ariel has strong advertising and customer engagement. However, Ariel has a higher price range than other brands like OMO and Perwoll. Because Ariel is a globally trusted brand and has a strong parent company, the brand is a distant and strong competitor of DryClean.

Omo (Unilever)

OMO is a laundry detergent brand by Unilever, which is a multinational FMCG company with various home care, personal care, and nutrition products. OMO uses a marketing strategy that appeals to the emotions of consumers with their slogan “Dirt is Good” and has established itself as a strong and trusted brand in the market. OMO places emphasis on resilience and “welcoming dirt and stains along the way” as is stated on the Unilever website. Their strong marketing is followed by an approach that reduces the use of plastic. Other than their stance on use of plastic in packaging, OMO does not particularly emphasize sustainability or water- and energy-efficiency, which is a distinguishing factor of DryClean. The brand has an average price range, more affordable than Ariel. We have identified OMO as a strong and distant competitor of DryClean.

Perwoll (Henkel)

Perwoll is a laundry detergent brand by Henkel AG & Co. The brand places emphasis on sensitive fabric care, as well as utilizing an emotional approach with a claim on making the consumer feel better through clean and cared-for clothing. The brand does not emphasize time or energy efficiency unlike DryClean. Perwoll is also a more affordable product with lower price ranges than

OMO and Ariel. Therefore, we have identified Perwoll is a strong and distant competitor of DryCare.

Customer Segmentation Analysis

Environmental Concerned Consumers

Sustainable environmental integrity is one of the very big concerns of environmentally concerned consumers. They desire products that agree with their morals. The solution that DryClean Tablets provides is revolutionary and ground-breaking, with an option of doing laundry without water that critically reduces water usage and eliminates groundwater pollution. Biodegradable enzymes and surfactants in tabs still guarantee great cleaning but at the same time leave no danger to nature-- it absolutely sells to an ecologically responsible consumer base. Further, the convenience of DryClean Tablets fits well into the hectic lives of such environmentally conscious people—no more maintenance headaches for busy professionals committed to a green lifestyle.

- **Demographics:** Typically aged 18-45, middle to upper-middle class, living in urban areas, with decent to high educational backgrounds.
- **Psychographics:** Value sustainability, environmental impact, and health consciousness. Participate in eco-friendly practices and have interests in green technology and sustainable living.
- **Behavior:** Regularly purchase eco-friendly products and show high brand loyalty.

Busy Professionals

Efficiency and time management is of the essence for those busy professionals, often leading hectic and demanding work schedules and personal agendas. This is where DryClean Tablets present their innovative solution: since there is no involvement of the conventional water-based laundry, time is saved, and laundry is easy. It also reduces the downtime of the machine and maintenance costs that come with water-related problems in a washing machine, hence making it a reliable choice with smooth operation. Busy professionals who desire practicality and eco-friendliness at

home now have a sustainable solution to the conventional laundry detergent, which is an important alternative to the convenience accorded by DryClean Tablets.

- **Demographics:** Aged 30-50, moderate to high income, college-educated, holding high-demand jobs in metropolitan areas.
- **Psychographics:** Prioritize time-saving and convenience. Interested in technology, personal productivity, and home automation.
- **Behavior:** Frequent users of convenience products, showing loyalty to efficient brands.

Hospitality (Hotels & Resorts)

Resource management is a key challenge in the hospitality industry, especially with hotels and resorts. These have been identified as some of the largest water-consuming institutions in Turkey. DryClean Tablets have brought an innovative approach that would hugely reduce water usage, thereby causing reductions in costs during operations and help in easing up on the carbon footprint. More to that, it enhances operational efficiency in the sense that it brings down machine downtime and costs related to maintaining equipment due to water-related problems in the washing machine, becoming a solution that hoteliers wish for.

- **Demographics:** Medium to large hotels in metropolitan cities and tourist destinations.
- **Psychographics:** Focus on operational efficiency, customer satisfaction, and environmental responsibility.
- **Behavior:** High-volume users loyal to reliable suppliers.

Universities and Boarding Schools

Universities are also in a better position to spend less on water and energy, and the money saved is allocated to other operations since these campuses have residential facilities. In addition, many institutions of learning have taken up green-friendly initiatives; hence, DryClean Tablets are one of those attractive options for administrators and students alike, working toward such goals.

- **Demographics:** Universities and boarding schools in urban and suburban areas.
- **Psychographics:** Committed to sustainability programs and improving student experiences.

- **Behavior:** Regular users of sustainable solutions loyal to brands supporting their goals.

Hospitals and Clinics

Hospitals and clinics place a high importance on cleanliness and safety; therefore, the biodegradable aspects of DryClean Tablets are very important. DryClean Tablets ensure hospitals maintain high hygiene standards, which are very crucial at such facilities. The tablets will also go a long way in supporting water conservation, a challenge to urban health facilities under tremendous pressure to reduce water usage, among other factors, yet keep clean.

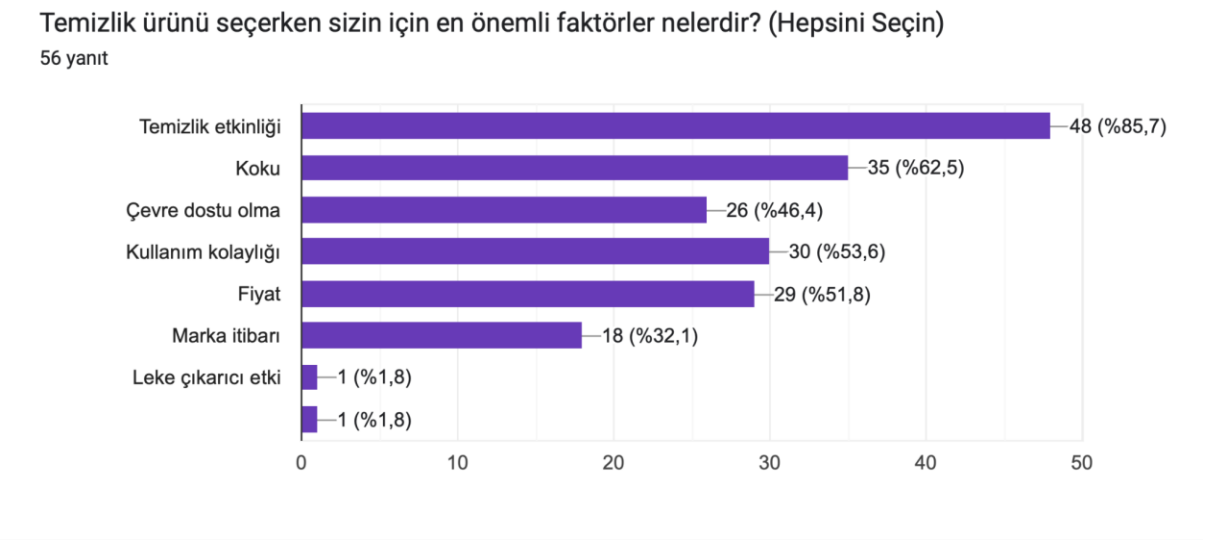

- **Demographics:** Hospitals and clinics in major cities.
- **Psychographics:** Prioritize hygiene, safety, and sustainability.
- **Behavior:** High-frequency users loyal to compliant and reliable brands.

Primary Research

Primary research was conducted by the product development team at DryClean Tablets to examine the consumption habits of potential users and customers. DryClean Tablets internet-based form creator was utilized, and 56 possible clients were contacted. The results were examined with the help of DryClean Tablets Report Builder. The specifics of the research project are detailed below.

DryClean Tablets Project Survey

The primary research consists of 21 questions and is divided into three parts: general preferences regarding the selection of a cleaning tablet, specific questions about DryClean Tablets, and demographic questions respectively for targeting and positioning purposes.
The survey sought to collect information about consumption behaviors, demographic characteristics, attitudes towards laundry solutions, preferences for eco-friendly products, and potential approaches to the DryClean Tablets product for individuals who are likely to use or purchase DryClean Tablets.

Source: DryClean Tablets Project Survey

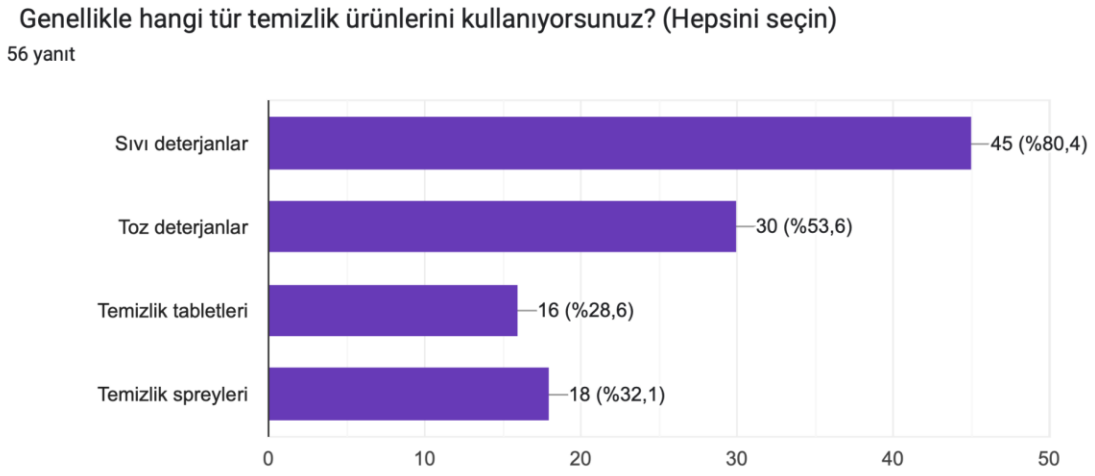

In the first part of the survey, general preferences regarding the selection of cleaning tablets were examined. It was found that 85.7% prioritize the effectiveness of cleaning, 62.5% chose the smell, 53.6% chose ease of use, 51.8% chose price, and 46.4% chose environmental friendliness. These results indicate that while selecting a cleaning product, multiple features are considered important by consumers. The least influential factors were the reputation of the brand, at 32.1%, and stain removal effect, at 1.8%. This suggests that if DryClean Tablets focus on the most demanded features, the newness of the brand may have the least impact on consumer preferences.

Source: DryClean Tablets Project Survey

In the second question, customers were asked how frequently they use cleaning tablets to understand their behavior based on the frequency of consumption. This data is essential for

deciding how many tablets should be in each package and for estimating monthly sales, which helps with planning revenue. The data reveals that 33.9% of respondents don't use cleaning tablets at all, 21.4% use them daily, 30.4% use them weekly, and 8.9% use them occasionally. This indicates a valuable opportunity to persuade the 33.9% who aren't using cleaning tablets to start, while also guiding those who already use them towards trying DryClean Tablets.

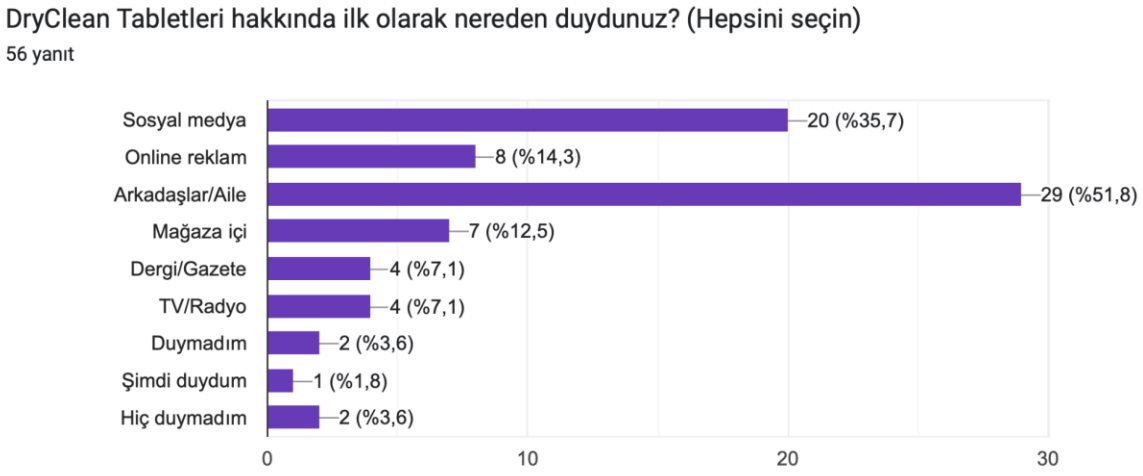

Source: DryClean Tablets Project Survey

In the next question, participants were asked about their preferred detergent choices to understand their selection of a cleaning product. The findings revealed that the majority of respondents, at 80.4%, opt for liquid detergents, 53.6% favor powder detergents, 32.1% utilize cleaning sprays, and 28.6% select cleaning tablets. These figures suggest a variety of cleaning agent preferences among the participants. This data helps in recognizing the preferred types of detergents, allowing for the offering of a variety of choices to meet the preferences of many consumers.

In the final question of the initial survey section, information was gathered about where participants buy their laundry detergent to identify successful customer engagement methods. The research discovered that 96.4% of people prefer to buy their detergent at supermarkets, compared to only 28.6% who purchase it online. Moreover, 12.5% acquire it from nearby establishments, another 12.5% from bulk suppliers, and 10.5% from specialty stores. This shows that despite the rise in online platform usage, the majority of individuals still favor shopping at physical stores. Nevertheless, the importance of online market preferences should not be overlooked. Through the examination of this data, we can pinpoint the most efficient distribution channels for reaching customers (Figure 1.1).

During the second section of the survey, respondents were questioned about their willingness to switch from their current cleaning products to DryClean Tablets and to gauge their probability of actually using this new product. Additionally, the most effective features of DryClean Tablets were

identified by respondents, and their expectations for the product were gathered if they were to choose it.

Source: DryClean Tablets Project Survey

Participants were questioned about their initial source of information on the product in order to evaluate the advertising's impact. 7.1% of individuals were unaware of the product, while 1.8% had just become acquainted with it, suggesting that almost 5 out of 56 participants in the research had not been reached by existing marketing strategies. In the survey, 51.8% of participants chose word of mouth as the best promotion method, with social media following closely at 35.7%. Online ads were selected by 14.3% of respondents, magazines by 12.5%, newspapers or journals by 7.1%, and TV or radio by 3.6%. These results suggest that even with technological progress, word of mouth continues to be the most effective way to interact with customers.

In the following inquiries, the initial reactions of the participants upon finding the product were evaluated. The results indicated that most (42.9%) suggested a strong interest, 26.8% were neutral, 16.1% were uninterested, and 12.5% were very interested. The remaining institutional representatives were not interested. Although a small portion may not be interested, overall interest is still quite high (Figure 1.2).

Source: DryClean Tablets Project Survey

Survey respondents were asked to rank the qualities that would most influence their decision to use the product and its potential benefits.

- Cleaning Efficiency (69.6%): The main reason for using the product is its effectiveness in cleaning. Highlighting the effective cleaning abilities of DryClean Tablets, supported by feedback and exhibits, can increase consumer trust and encourage usage.

- Ease of Use (67.9%): The importance of convenience is highlighted, showing that consumers favor solutions that save them time. Emphasizing the ease of using DryClean Tablets in the dryer and their capacity to clean clothes without water may attract busy professionals and individuals looking for convenient laundry options.

- Emphasis on Sustainability (60.7%): Marketing the ecological advantages of DryClean Tablets is essential, as a significant number of participants prioritize environmental friendliness. Highlighting the environmentally friendly ingredients and reduced water and energy consumption of the product may appeal to customers who care about the environment. The high ranking of eco-friendliness among customer priorities when selecting a product reflects a significant change in consumer mindset. This shift can be explained by the following points, supported by various sources. Being environmentally aware originates from practicing mindfulness. Becoming conscious of the environment requires ongoing learning and growth. It requires making informed choices to promote a sustainable future and encouraging others to do the same. Hence, a rise in educational attainment and customer awareness regarding their priorities when choosing products. [9]

[9] The Green Muse Blog, "Embracing Eco-Consciousness and Eco-Friendliness: A Comprehensive Guide for a Sustainable Future," 2 Jan, retrieved from https://www.thegreenmuseblog.com/articles/embracing-eco-consciousness-and-eco-friendliness-a-comprehensive-guide-for-a-sustainable-future.

- Affordability (50%): Half of the participants prioritize affordability, showing sensitivity to pricing. Performing a cost-benefit analysis to demonstrate potential long-term savings and offering competitive pricing tactics or subscription plans can tackle this issue.

- Fragrance (37.5%): Providing a range of scents such as Lavender Breeze, Mountain Freshness, and Ocean Zephyr caters to different tastes and boosts the product's attractiveness. Emphasizing the delightful and long-lasting scents could serve as an extra selling advantage.

- Building Brand Recognition and Trust (19.6%): Establishing familiarity and reliability with the brand is crucial for entering the market. Employing ongoing branding strategies, social media initiatives, and partnerships with influencers can boost brand recognition and trustworthiness.

- Advantages for Health (1.8%): Even though it's a small factor, highlighting the non-toxic and hypoallergenic features of DryClean Tablets can provide peace of mind for health-conscious individuals and those with sensitivities or allergies.

- Communication of Feedback (1.8%): A few participants indicated a willingness to give feedback. Establishing avenues for clients.

These indicate that the product's aims align well with customer expectations.

Furthermore, respondents showed equal interest in using scents such as lavender essence and ocean breeze, with 26.8% expressing a preference for each. The remaining 17.9% preferred mountain freshness. These preferences should guide the production volume for each scent during manufacturing (Figure 1.3).

The question assessing how likely customers are to use waterless cleaning products was designed to analyze their attitudes toward the product. The results indicated that a small number of individuals, 26.8%, view it as very probable, 37.5% believe it is likely, 17.9% are neutral, 16.1% perceive it as improbable, and the remaining individuals consider it highly improbable. This demonstrates that most of the participants are open to experimenting with waterless cleaning products, showing a willingness to try new products and an emphasis on sustainability. Evaluate the returns on investments in the manufacturing process by assessing participant feedback (Figure 1.4).

When respondents were asked about their concerns related to waterless tablets, 57.1% expressed worries about effectiveness, 19.6% about safety, 8.9% about availability, 7.1% about price, and 3.6% about smell. The least concerns were about health and the lack of a dryer, which would

prevent them from using the product.To effectively reach out to customers, promotion tools should emphasize the product's effectiveness and safety. It's important to make people aware of the product's accessibility and ensure that penetration pricing is considered to attract price-sensitive customers (Figure 1.5).

Respondents were asked to select the most effective circumstances for using the product. The results showed that the top-ranked situations were during water shortages and when time is limited, with 67.9% and 57.1% choosing these options, respectively. Additionally, 48.2% selected daily laundry, 55.4% chose travel, and 33.9% opted for delicate fabrics. These results indicate that the top priorities align with the product's aim of offering waterless cleaning solutions (Figure 1.6).

Participants were questioned on whether they preferred a laundry tablet that can be utilized in both washing machines and dryers or one specifically created for dryers. The findings indicated that 73.2% of people would opt for a tablet that serves dual purposes, potentially saving time and money. Additionally, 19.6% indicated that it does not matter to them, while the remaining respondents preferred a tablet designed only for dryers (Figure 1.7).

Source: DryClean Tablets Project Survey

The question about the product's environmental impact shows how participants weigh water scarcity when selecting a cleaning product. The findings indicate that 41.1% of participants deem it highly significant, 44.6% find it significant, and 10.7% are indifferent. There were not many responses indicating that it is unimportant or not important at all. This demonstrates that most respondents, representing the expected customer base, prioritize environmental friendliness.

Source: DryClean Tablets Project Survey

Asking "How much extra would you spend on DryClean Tablets?" shows that customers are ready to pay more for a green product, even though they also value other features in the top three. Around half of the participants are open to paying a 1-10% increase in price, showing sensitivity to pricing. The product is highly sensitive to price changes, so if the price increases, consumers are likely to choose a less expensive option with similar features. Moreover, 30.4% of respondents mentioned they wouldn't be willing to pay extra for the product.This element must be taken into account seriously when deciding on the pricing strategy.

Respondents expect to obtain the product from the same types of stores as they do with other products. Specifically, 80.4% would prefer to buy it from supermarkets, 14.3% from online stores, and relatively small numbers expect to purchase it from local shops, specialty markets, or wholesale clubs. This indicates that customers prefer to access the product from easily reachable stores (Figure 1.8).

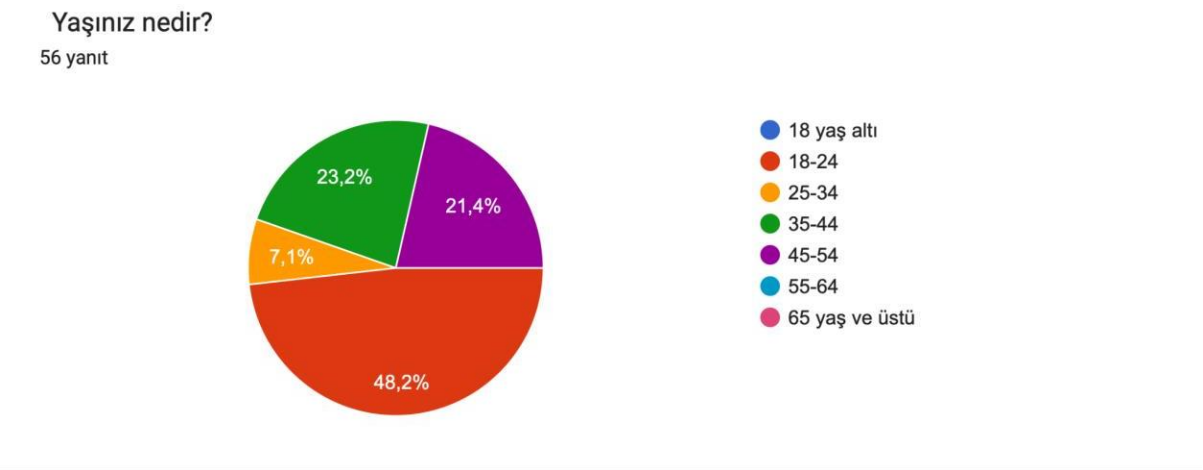

Source: DryClean Tablets Project Survey

The inquiry about switching from current detergent to DryClean Tablets was created to measure the possibility of changing. The results indicated that a high percentage (42.9%) of participants were very open to change, while 39.3% were moderately open to change, 16.1% were indifferent, and the remaining were unlikely to change. No respondents considered it impossible to switch. This suggests that people are open to changing their tablets if they experience the effectiveness of the product.

When asked for additional comments or feedback about DryClean Tablets, no respondents provided further input. This suggests that the product aligns well with the expectations of the respondents.

The final questions of the second part of the survey aimed to evaluate customer satisfaction with the product based on their current knowledge and their likelihood to recommend it. Evaluating the likelihood of customers recommending DryClean Tablets is essential as word of mouth is a key factor in advertising success. The results revealed that 51.8% of participants (29 people) are willing to recommend the product, 44.6% (25 people) might suggest it, and only 3.6% (2 people) would not recommend it to their family and friends (Figure 1.9).

The final part of the survey focused on demographics to help us better understand who the potential clients might be and their income. This information can help in segmenting the market and directing product efforts.

Source: DryClean Tablets Project Survey

The survey's initial question was about the age of participants to determine potential customer age groups. The results showed that 48.2% of respondents are in the 18-24 age range, 7.1% are between 25-34, 23.2% are 35-44, and 21.4% are 45-55. This indicates that the survey primarily reached a younger audience, with fewer older participants. While the group isn't fully diverse, the younger demographic's openness to new and eco-friendly products could still lead to successful engagement and positive results.

The survey mainly attracted females, with 78.6% identifying as women and 21.4% as men. This indicates that the product has successfully reached women, fitting in nicely with its target audience (Figure 1.10).

The survey results on household income showed that 34.5% of participants earn between 25k and 50k TL, 20% make between 50k and 75k TL, 14.5% earn between 75k and 100k TL, and 12.7% make more than 100k TL. Only 10.9% earn less than 25k TL, which is considered low, and 7.3% chose not to disclose their income. These findings suggest that the majority of the target audience possesses a relatively high income. Nevertheless, price continues to be a significant aspect in product selection, indicating that customers value price sensitivity regardless of their income (Figure 1.11).

Target Market

The target market analysis focuses on the identification of the most important and reachable customers. Explain how DryClean Tablets will try to meet the needs and wants of key consumer groups, such as environmentally concerned consumers, busy professionals, hospitality businesses, educational institutions, and health facilities. DryClean Tablets advertises themselves as innovative, eco-friendly water savers that keep you current with efficient laundry care and sustainability by tapping into psychographic, behavioral, demographic, and geographic factors

Segmentation

a) Demographic Segmentation

For environmentally conscious consumers the demographic profile typically includes people between 18-45. This group usually falls into middle to upper middle class income categories. They usually live in urban areas with decent to high educational backgrounds.

Busy professionals are usually around 30 to 50 years of age and belong to moderate to high income categories. They reside in metropolitan areas and are mostly college-educated. They are mostly holding positions as managers, executives and other high demanded jobs that require time saving in household matters.

Hospitality businesses that are targeted include medium to large hotels in metropolitan cities and tourist destinations such as Istanbul, Izmir, etc. these places often prioritize sustainability and efficiency to enhance their brand image.

Educational institutions targeted are universities and boarding schools located in urban and suburban areas. These institutions have mostly vast campuses with residential facilities such as dormitories and student housing that value sustainability in their operations.

Healthcare facilities include hospitals and clinics in big cities. They prioritize hygiene, safety, and sustainability making DryClean tablets an attractive solution to their laundry needs.

b) Psychographic Segmentation

Environmentally conscious consumers value sustainability, environmental impact, and health consciousness. They have lifestyles that are active in eco-friendly practices and participate in environmental activities. Their interests often include green technology, sustainable living, and organic products.

Busy professionals value their time, convenience, and their work-life balance. Their busy schedules mean that they prioritize products that save time and simplify their day-to-day tasks. These people are usually interested in technology, personal productivity, and home automation.

Hospitality industries prefer high operational efficiency, customer satisfaction, and environmental responsibility. They focus on providing quality services and are interested in sustainable tourism, luxury accommodations, and innovative hospitality solutions to boost their brand image and revenues.

Educational institutions value education quality, sustainability and innovation. These factors boost their worldwide ranking. They are committed to sustainability programs and focus on improving student experiences. Their interests are primarily green technology in education, student engagement, and campus sustainability.

Healthcare facilities value hygiene, safety, and sustainability. They adhere strictly to health standards and focus on patient safety. Their interests include eco friendly healthcare solutions, operational efficiency, and regulatory compliance.

c) Behavioral Segmentation

Environmentally conscious consumers regularly purchase eco-friendly products, operate in recycling and conservation efforts. They have a high usage rate for green products. They also show high loyalty to brands that align with their values.

Busy professionals seek out products that save time and simplify tasks. This leads to a more frequent use for convenience products. They show loyalty to brands that provide consistent quality and efficiency.

Hospitality businesses invest in products that improve operational efficiency and customer satisfaction. They use products in high volume due to the nature of their operations. They are usually loyal to suppliers that offer reliable and decent quality products.

Educational institutions implement sustainable practices and solutions, with regular use in institutional operations. They are loyal to products that support their sustainability goals.

Healthcare facilities prioritize products that ensure hygiene and safety, leading to high frequency of use in daily operations. They are loyal to brands that comply with health regulations and standards.

Targeting Process

The targeting process begins with a detailed segmentation analysis using demographic, psychographic, and behavioral variables.

Segmentation Analysis

The demographic analysis identified key age groups, income levels, educational backgrounds, and locations that align with the benefits of DryClean Tablets. Psychographic analysis shows the values, lifestyles, and interests of different segments. this help us to understand their motivations and priorities. Behavioral analysis examined purchasing behaviors, usage rates, and brand loyalty to identify our promising customer groups.

Prioritization and Targeting

The environmentally conscious consumers will be given top priority because they have a higher resonance with eco-friendly features and water-saving advantages of DryClean Tablets. Marketing to this segment will involve eco-focused campaigns and liaising with environmental organizations in order to make these consumers aware of the environmental benefits and long-term cost savings the product provides.

Busy professionals are engaged based on their need for convenience and efficiency. Marketing will point out the time-saving benefits and ease of use of DryClean Tablets through focused advertising to include industry-specific case studies.

One of the targeted key segments is the hospitality business, which uses lots of water in their operations. It will further market to include the industry-specific case studies and have programs on the cost savings and environmental benefits of using DryClean Tablets. Marketing will align the DryClean Tablets with educational sustainability goals and customized solutions with support services.

However, emphasis will be on health facilities because of their hygiene and safety concerns. The marketing of DryClean Tablets will be positioned as a reliable and friendly alternative providing good technical support to comply with the healthcare regulations.

With the above-given extensive segmentation, it shines like pearls that DryClean Tablets have brilliantly moved toward targeting with marketing efforts thoroughly tailor-made for each customer segment. This strategy approach ensures maximum possible towards adoption and spearheads DryClean Tablets overall success in the market.

DryClean Tablets may use a **differentiated** targeting approach to offer special provisions for unique needs to further penetrate their market and satisfy their customers. Below are some of the ways that DryClean Tablets can effectively position themselves as the leading eco-friendly and convenient laundry solution by making a relevant promise to meet the specific requirements and preferences of environmentally conscious customers, busy professionals, hospitality businesses, educational institutions, and healthcare facilities.

Product Description, Benefit Analysis and Positioning

DryClean Tablets are innovative and eco-friendly cleaners eliminating the water use during the cleaning process. Tablets are easily usable and time saver for the customers. Reducing the water use, protects both the nature and the pocket of the customers. DryClean Tablets can be both used in washing machines and drying machines. The disposal of Tablets do not create damage to nature as well as the liquid detergents, which is helped by the eco-friendly chemical structure of the Tablets. The Tablets are available in three scents, Lavender Breeze, Ocean Mist and Mountain Fresh.

Benefits for target Market

The analysis of the target market suggests that the customers seek for the convenience of the product. DryClean Tablets offer a simplified laundry process. A simplified version of the cleaning cycle saves time for the customers. The time saving option catches the interest of people with hectic schedules. This would channel the busy customers to purchase and use the Tablets. This also states that, the convenience and time saving quality of Tablets would be a possible solution for busy people.

The Tablets can easily be stored in each part of the intermediaries. The solid and dry form of the Tablets minimizes the care for storage. In comparison to liquid detergents, Tablets take less space, and do not carry a risk of pouring during transportation or storage. This would also create an advantage during the shopping process. It is expected that the lighter Tablets than the liquid detergents are preferred. The easy storage of Tablets are also in benefit of customers having limited space in their apartment.

Unlike the liquid detergents, the chemical structure of DryClean Tablets also eliminates the risk of damage to nature. The biodegradable surfactants can easily dissolve in nature even in the disposal form. The reduced environmental impact can catch the attention of environmentally friendly customers. This also matches the values of the customers and the ever single level on the marketing channels.

Tablets are travel-friendly as well. In case of any trip or travel it offers clean clothes for the customers. The liquid restrictions caused by any possible chemical damage are also eliminated by the dry and solid form of the Tablets.

The biodegradable surfactants are also safe for human health. Liquid detergents always carry the risk of a drop splash while using. In this case, it would be inevitable to be damaged by the toxic ingredients of the detergent. Any contact with the toxic material can damage the human skin. This possibly can lead to any allergens. In addition to an environmentally-friendly structure, Tablets do also care about human health. The dispersion of toxic materials within the air is also tried to be eliminated. The end users of Tablets have no need to worry about the possible airway toxins. The packaging and the chemical structure of the Tablets serves a clean and scented breathing. Customers can comfortably use Tablets without considering any allergens, skin damage and

airway toxins. Hence, it would be preferable for the customers having sensitive skin or basically who do not want to get any possible harm from the cleaner they use.

The versatility of the Tablets tries to keep the preferences of the customers at the easiest level. The use of Tablets are suitable for the variety of fabrics and colors of the clothes. There would be no need to have different liquid detergents for different kinds of fabrics and colors. Purchasing different detergents for different fabrics would have a negative impact on both the storage area in the apartment and budget of the customer. Additionally, a variety of detergents are purchased for the colors of the laundries. Considering both the color and fabric issue, DryClean Tablets come up with a solution for this problem. The Tablets are applicable for any kind of fabric and any color of laundry. Hence, there would be no need to buy several liquid detergents and store them. The customers with diverse laundry needs would be interested in the versatility of DryClean Tablets.

The enhanced scent option serves for a long lasting fragrance on clothes. Liquid detergent users can be complaining about the disturbing smell on the washed clothes. The washed clothes can smell inconveniently. This may also regard the quality of the fabric, water used and the ingredients of the detergents. In this case, DryClean Tablets eliminate the use of water, so that there would be no disturbing smell caused by wet laundries. The quality of the fabric does not create a problem for the Tablets as they are applicable for different fabrics. The ingredients of tha Tablets are eco-friendly, and also would not create any airway toxins. This can comfort the end users. The scent of detergents would diffuse into airway toxins and disturb the end customer. However, Tablets offer dry laundry with non-toxic pleasant scents. The customers who are appealed by enjoyable scents on their laundries would be interested in the scent options of DryClean Tablets.

Positioning

The target market analysis supports and suggests that most of the potential customers have hectic daily schedules. Daily time management is one of the priorities for such customers. DryClean Tablets minimizes the care for laundry time management. Having reduced the spare time on laundry, customers would be able to focus on their daily necessities. Primary target market consists of the customers who wish to save time for laundry. Secondary target market has the customers who can benefit from the advantageous features of the Tablets. This market varies with the

eligibility of the Tablets. Tablets would be demanded as long as the demand for clean clothes continued for varied circumstances, considering the eco-friendly and dry-solid structure.

The competitive analysis of the Tablets states that the outstanding features are the dry and solid form with the elimination of water in use. The possible competitors would be laundry pods and traditional liquid detergents. The laundry pods do not meet the service DryClean Tablets offer. This creates an advantage in between pods and tablets. The fundamental competitive advantages are; water free cleaning, biodegradable surfactants and ingredients, compact and easy use. These competitive advantages result in a Unique Selling Proposition (USP) as "Set a new standard for your laundries with water free cleaning and biodegradable toxin free disposal."

The core brand message focuses on the eligibility of Tablets. Experiencing a water free cleaning is in benefit of both nature and the customer. Getting advantaged by the benefit would serve for the customer satisfaction. By eliminating the toxic disposal a sustainable lifestyle is tried to be created.

In the process of creating a new standard and a lifestyle for the customers marketing channel carries a great importance. Retail partnerships and digital marketing take the biggest part in marketing channels. DryClean Tablets are packed cleaning materials suggesting that the retailing process would be almost as same as the traditional liquid detergents and laundry pods. Retail partnerships can be formed with the retailers and wholesalers retailing the competitor products. Being stored and retailed in a same retailer would increase the range of customer preferences, and it is expected that the Tablets are prioritized among these preferences.

In addition to retailing buildings, digital marketing increases the chance of selling the end product. Collaborations created by social media and influencer partnerships raises the value of Tablets and creates recognition. The recognition can be the key factor for advertising and marketing the Tablets. It is also planned to collaborate with digital delivery service companies so that the customers can easily manage to reach Tablets.

Marketing Mix Decisions

The marketing mix decisions for DryClean regarding product, place, price, and promotion strategies are designed to drive the product's entry and growth into the laundry care market. The product strategy focuses on innovation by emphasizing the unique waterless cleaning technology and eco-conscious approach. This aspect of DryClean caters to environmentally conscious consumers and aims to establish DryClean as a leader in sustainable solutions. By leveraging partnerships with leading retailers and e-commers platforms, DryClean aims to ensure wide availability and convenient access for customers. The pricing strategy is competitive yet sustainable, which reflects the value of DryClean while covering production costs, ensuring profitability, and creating a competitive advantage against giants in the laundry care market.An integrated marketing communication (IMC) plan is employed across various platforms, including digital marketing, public relations, direct marketing, and promotional campaigns. This plan is aimed to drive product awareness, encourage customers to switch to DryClean, and foster brand loyalty.

Product Decisions

DryClean Tablets are designed to revolutionize the laundry cleaning process by offering innovative, waterless, and energy-efficient solutiosn to the traditional laundry cleaning method. The core benefits of DryClean are based on the innovative waterless cleaning technology, offering a convenient and eco-conscious solution for laundry cleaning. Due to DryClean's design that allows effective cleaning without the need for water, the product is particularly suitable for regions facing water scarcity, for consumers who are environmentally conscious, for consumers who see value in time-saved from drying washed laundry, and for consumers who are looking for an affordable and convenient option for dry-cleaning centers. The convenience factor of DryClean is significant, as the easy-to-use pods simplify the laundry process, making it ideal for travel and busy individuals. In addition, the eco-friendly nature of DryClean aligns with the growing consumer demand for sustainable products as the pods are manufactured from biodegradable materials.

The benefits that DryClean has to offer as an **augmented product** are significant regarding customer satisfaction and achieving as an augmented product, DryClean offers many benefits to the end-consumers that further enhances the product's value proposition. Customer support

services that area available all days of the week are aimed to guarantee satisfaction for customers and provide solutions for problems that may emerge while customers use the product, as well as handling confusions with how the product is to be used from first-time users. A subscription service that offers monthly delivery options to ensure customers do not run out of pods can also foster customer switching and brand loyalty. Affordability and special deals for subscribed customers is intended to drive demand.

The **brand decisions** for DryClean are significant in establishing the brand as a leader in the laundry care market and creating consumer awareness for the product. The brand name DryClean emphasizes the elimination of water from the laundry cleaning process and the eco-conscious aspects of the product. The brand image is to be carefully crafted to position the brand as innovative, sustainable, and convenient against competitors. In order to achieve and maintain this brand image, DryClean is planned to stress the ever-growing need for waterless and energy-efficient options for traditional aspects of the daily life. Marketing efforts are designed to encourage consumers to opt for sustainable solutions, such as using moral appeals regarding water scarcity and climate change. The marketing efforts to emphasize the eco-conscious aspect of DryClean is predicted to play a significant role in B2B markets as these customers contribute more to the use of water in cleaning laundry (such as hotels and dormitories). These establishments that DryClean hopes to make its customers will benefit from advertising their use of DryClean to establish an eco-friendly image. Additionally, the time-saving process of DryClean is to be stressed, especially during the introduction of the product into the market as this feature is predicted to be a major selling point in the domestic context.

As for **line decisions** for DryClean, different variants for various needs such as sensitive skin, different fabric types and colors, and scent options will be available. These different options strive to address diverse needs of customers, increasing the chance of customer switching. After the success of DryClean, expansion decisions may include complementary products such as stain removers and fabric freshener sprays. These additions will be in line with DryClean's core values and offer customers more innovative solutions to practical and convenient laundry care.

The **packaging** of DryClean is designed to be eco-friendly with recyclable or biodegradable materials to align with the brand's core values. Attractive, minimalist design with clear branding

and instructions are prioritized. Packaging is also aimed to emphasize portability, with compact and easy-to carry packaging for convenience for travel.

Labeling decisions include providing detailed information, usage information, and environmental benefits on both the packaging and the instruction card without creating a crowded package. Readable and clear lettering are crucial to customer satisfaction as it is aimed to reduce confusion regarding how to use the product to a minimum, increasing consumer satisfaction.

In future lifecycle plans, DryClean Tablets will follow strategic planning for every step that may be taken in the product life cycle to sustain growth and market existence.

a) Introduction stage

Brand-building during this stage includes efforts to create product awareness and trial by heavy advertising and promotion targeting early adopters. Selective distribution channels and setting up eco-friendly store partnerships will be other key factors for going into the market.

b) Growth Stage

In line with the movement of the product into growth, major retail chains and online avenues for heightened accessibility will be incorporated by DryClean Tablets. The addition of new variants of the product into the product line to meet specific customer needs for sensitive skin and various fabric types will be presented. Pricing strategies will be in place to enhance penetration into the mass market without reducing profitability.

The effort is made in the growth phase to differentiate DryClean Tablets more strongly from other competitors by emphasizing unique benefits and enhancing customer loyalty through better customer care support services, as well as subscription models. In this case, intensive distribution will continue and advertisements will work mainly to confirm the brand image and show the ecological features of the product.

c) Maturity Stage

The strategies in the maturity stage will be toward maintaining market share and extending the life cycle. DryClean Tablets will have more variations under the brand and models based on different segments of consumers. Revision in pricing strategy is to meet or even better the competitors; extension of distribution will increase the availability. Advertisement will put more emphasis on brand distinctions and benefits to support the product market position, and intensify sales promotions to stimulate brand switching.

d) Decline Stage

In the decline stage, if the market trend swings or competition intensifies to a much larger level, DryClean Tablets will discard the weaker product variants and try to maintain a core line of successful products. Cost reduction will be expected through some ways, such as reduced advertising and selective distribution to keep profitability high but still satisfy those core customers.

Place (Distribution) Decisions

The distribution strategy for DryClean includes both B2C and B2B are tailored to meet the diverse needs of the product's customer base. Various distribution channels are included to maximize market reach and brand visibility.

a) B2C Distribution Strategy

Online sales channels are to be utilized to enhance customer awareness. Selling through e-commers platforms like Hepsiburada, Trendyol, and Amazon Turkey are aimed to increase brand visibility and accessibility for a wide range of customers. Developing the brand's own e-commerce platform can also facilitate direct sales through providing detailed product information, customer reviews, and easy navigation.

Retail distribution is key to reaching customers. Partnering with major supermarket chains to stock DryClean on shelves is aimed to increase customer awareness and drive sales, especially during the introduction of the product into the market. Collaborating with eco-friendly specialty stores that align with the sustainable aspect of DryClean will further enhance the environmentally

conscious image of DryClean while helping reach customers who are actively looking for sustainable options.

The retailing decisions should align with the eco-friendly branding and innovative nature of the product. The atmospherics should represent the vision of the company in physical stores, especially the ones specializing in eco-friendly products. The store design should create a clean, modern and natural visualization. That is why leaves or bamboo can be used for the display. Scent marketing is essential, both for evoking cleanliness and providing the opportunity to try different options of the product. Lavender scent can create a pleasant shopping environment. Storytelling in the marketing campaign can highlight the origin of the product. Interactive display like demonstrative touchscreens, explaining the importance of water and contribution of DryClean Tablets in the preservation of nature, can be persuasive in the purchasing decision.

Offering a subscription model through the DryClean website is designed to provide convenience for customers by delivering the product directly to their homes at regular intervals, ensuring that they do not run out of the product. This model creates a competitive advantage for the brand as it distinguishes DryClean from competitors and provides customers with an unmatched service in the laundry care market.

Conducting pop-up events in high-traffic areas like shopping malls or community events to raise awareness and demonstrate the product's effectiveness directly to consumers. Through subsequent research on eco-consciousness levels, the locations of these pop-up events can be selected to be offered at regions that particularly possess DryClean's core values. These events will help enhance customer relationships and achieve a positive word-of-mouth.

The value delivery network provided by the channels is crucial for the survival of the product so forecasting potential challenges and providing solutions can be helpful. Potential horizontal conflicts can be between physical sellers and e-commerce platforms. Online channels can provide lower pieces and draw customer attention from physical retailers. Providing a sophisticated in store experience with the atmospherics can close the gap. Also differences in marketing mix decisions like pricing or packaging could lead to dissatisfaction among international customers. Strong local organizations and local management can help maintain consistency. Also, tailored marketing strategies for each domestic market can turn the differences beneficial.

Some vertical conflicts can occur between manufacturers and other levels of channels. For instance, the manufacturers might bypass a step in the upstream like wholesalers by having a direct relationship with the customer. A clear channel strategy that has certain roles can prevent such occasions. Also, retailers and end customers may face the problem of consistency. The different marketing strategies of retailers might lead to dissatisfaction. The branding can also be damaged by retailers not fitting strategies with DryClean Tablets vision. Specific guidelines for the marketing strategy and informational seminars to the retailers can fix the situation.

b) B2B Distribution Strategy

For B2B markets, employing a dedicated sales team to engage directly with business clients is key to reaching sustainable-minded establishments. Focusing on hotels, laundromats, and drycleaners while focusing on personalized solutions and offering volume discounts is predicted to encourage customer trial. Developing relationships with such businesses through regular visits and updates on product developments will foster loyal customers in the long-run. Tailored promotional activities can be utilized can be encouraging for these clients as promotional activities will benefit them by increasing traffic and demand by customers who are willing to try new laundry solutions. In addition, product demonstrations in industry-specific expos, trade shows in the hospitality and cleaning industry are predicted to showcase benefits of DryClean in person and developing strong relationships with potential bulk buyers.

Partnering with national and regional wholesalers who apply products to the hospitality industry and professional cleaning services is predicted to be a competitive advantage for DryClean. This approach is designed to ensure that the product is readily available for bulk purchase, making it convenient and cost-effective for clients.

Partnerships with environmental organizations and sustainability initiatives will serve the brand image and align with DryClean's core values. Sustainability certification programs will also increase DryClean's credibility and consequently attract more business clients.

Price Decisions

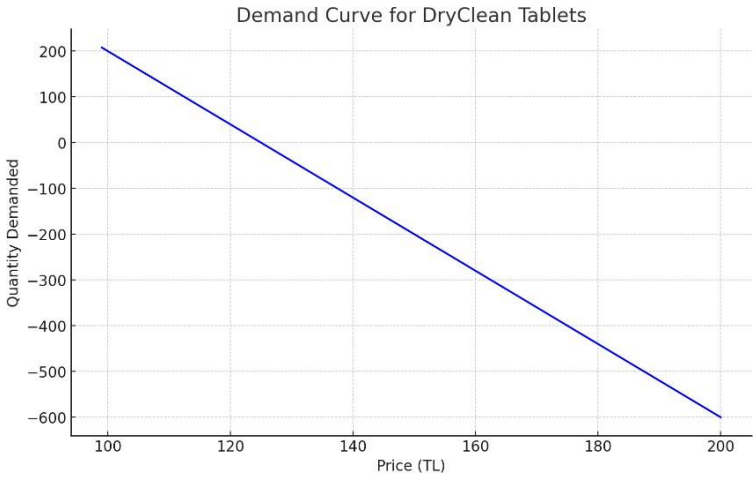

The pricing strategy for DryClean is formulated to achieve a balance between accessibility and profitability. It is important that pricing decisions reflect the product's premium quality and innovative technology while ensuring affordability to reach a wide consumer base. To determine the price range, factors including production costs, competitive landscape, customer perception of value, and economic conditions are taken into consideration.

Employing a value-based pricing strategy that recognizes the unique benefits the product offers such as environmental impact, convenience, and innovative technology in the laundry care sector. It is important that pricing objectives align with the brand's commitment to maintaining product quality leadership while capturing market share. Due to the fact that DryClean Tablets aim to encourage consumers to shift away from traditional laundry cleaning methods, a pricing strategy that recognizes competitor prices is crucial to emerge as a powerful alternative. At the introduction stage, cost-plus pricing approach is initially utilized to cover all production and operational costs while keeping a profit margin. This approach helps to create a sustainable product plan for the company while enabling future investment and growth in the product.

For the B2C market, the retail pricing strategy considers the psychological pricing points that resonate with eco-conscious consumers who are typically willing to pay a premium for products that align with their values. However, as the brand aims to reach a wider customer base than only consumers who actively search and purchase eco-friendly products that provide alternative solutions to daily problems, placing a high premium is predicted to position the product for only this demographic. As DryClean aims to convert traditional consumers by raising awareness, penetration pricing during the introduction stage of the product can help capture curious consumers who are willing to try alternative solutions. Competitor prices are considered to determine a price range.

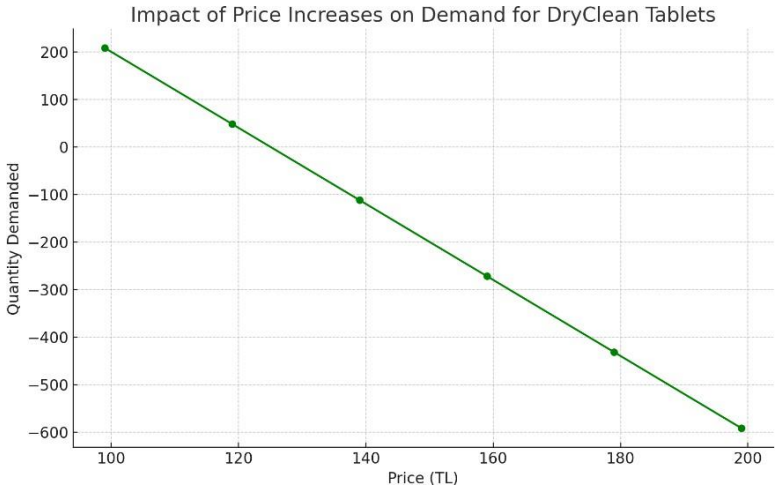

Demand Analysis

Considering that DryClean is entering a new market, the demand for this product in the laundry care and household goods markets should be analyzed. The primary research provided insights into consumer pricing sensitivity and customer willingness to pay a premium for an eco-conscious alternative to traditional laundry detergents. Approximately 51% of the surveyed participants indicated that they would be willing to accept a 1-10% higher price, which demonstrates a cautious but present interest in paying a premium for a sustainable alternative. However, there is also a significant 30.4% of respondents who stated that they are not willing to pay a premium. This data suggests a divided consumer base where the pricing strategy needs to balance premium pricing and remaining competitive against less expensive, conventional products. The graph below shows the projected demand curve for DryClean Tablets.

Projected demand curve for DryClean Tablets

Given the mixed response regarding pricing of DryClean Tablets, the product appears to have somewhat elastic demand characteristics in certain segments of the market. The elasticity is higher among consumers who are not strongly motivated by the product's water-efficient features alone. This indicates that while there is a market for premium-priced, sustainable products, it is likely that a considerable segment of potential customers would switch to cheaper alternatives if the difference in prices becomes high. The graph below shows the projected demand curve for DryClean Tablets.

Projected impact of price increases on demand for DryClean Tablets

Pricing Strategy

Since the primary research suggests that a promising portion of surveyed customers are willing to pay a premium for this sustainable option, a skimming pricing strategy at the introduction of the product will generate maximum revenues from innovator customers and those who are actively seeking sustainable options to conventional household products. However, a significant premium could alienate a large portion of potential customers. Therefore a modified skimming approach should be adopted.

- The introductory pricing of DryClean Tablets at a moderate premium, not exceeding 10%, is predicted to cater to customers who are not as sensitive to price changes and are willing to pay more for sustainable products.
- Depending on the later success of DryClean and the market response, as well as the competitive landscape, the price of DryClean can be adjusted gradually after the introduction of the product. This approach can help recover R&D costs without causing a significant customer loss.

According to the demand and market analysis, the 139 TL price per unit for DryClean Tablets in the introductory stage proves generate the most revenue from innovators and customers who are willing to pay a premium for sustainable features.

Break-Even Analysis

Through research of production facilities, it has been found that the initial manufacturing costs of DryClean will be around 50,000 TL (fixed costs). The table below shows a detailed analysis of manufacturing costs per unit.

Cost Component	Cost per Unit (TL)
Raw Materials	8.50
Labor	7.00
Packaging	5.00
Equipment and Utilities	4.50
Research and Development	10.00
Marketing and Promotions	7.00
Logistics and Distribution	7.50
Total Cost per Unit (TL)	49.50

- Fixed Costs: 50,000 TL
- Price per unit: 139 TL
- Variable cost per unit: 49.50 TL

Future Price Adjustments and Strategies

Due to the elastic nature of demand for DryClean Tablets, promotional pricing can be implemented. This can be done through temporary price reductions and bundle offers to attract customers from all segments. Using this approach especially during the initial launch period will encourage customer trial and adoption.

A dynamic pricing approach through monitoring market trends, consumer feedback, and competition prices is predicted to address varying levels of price sensitivity across different market segments.

In order to increase customer retention and value perception among users who initially try DryClean Tablets at a promotional price, there can be loyalty programs developed. Offering

rewards, discounts, or exclusive variant products at the late stages of the product life cycle will help retain customers and attract new ones.
With the variable cost per unit of 49.50 TL and the fixed costs of 50,000 TL, DryClean Tablets would need to sell approximately 559 units to break even.

Promotion Decisions

The Integrated Marketing Communication (IMC) plan is outlined for B2C and B2B markets.

a) Advertising

Eco-conscious consumers and busy professionals can be targeted through the use of social media platforms such as Instagram and Facebook, as well as through Google Ads. Placing print ads in lifestyle magazines that eco-conscious values are highlighted can be a medium to consider. However, print ads are not preferrable in the introduction stage as it is best to not incur this cost where profits will most likely be negative and print ads will not be as effective as other media for advertising. Running commercials on popular TV channels is considerably an approach that will bring more brand awareness and interest in the product. For advertising, moral appeals are predicted to reach eco-conscious customers and align with the brand's core values. Moral appeals can be coupled with stressing the time-saving benefit of DryClean Tablets as this aspect of the product is likely to resonate with working parents, university students, and other busy individuals.

b) Direct marketing

Sending promotional emails that highlight the benefits of DryClean Tablets to potential customers can help as the product is introduced to a wide range of consumers. This approach will be a useful way to reach consumers that does not require too many resources, which will be useful during the introduction stage.

c) Personal Selling

To increase customer awareness and brand visibility, demonstrations on how to use the product can be conducted in retail stores. Providing such free trials for customers is planned to encourage them to let go of any biases they may have toward the product if they have any. More potential customers are aimed to be attracted through these demonstrations. Additionally, friendly and persuasive sales representatives should be employed to approach environmentally conscious stores and large retail chanins.

d) Sales Promotion

During the introduction stage, offering discounts for DryClean can help the product penetrate the market. After trials occur, bundle deals can be offered in retail stores to encourage switching to DryClean Tablets instead of traditional laundry detergents. Loyalty programs can also be utilized to lead to first-time and repeat purchases. Another sales promotion tool to increase brand awareness for DryClean is distributing free samples through retail partners and at events. This will lead to interest in the product and an opportunity for consumers to try DryClean Tablets. Providing free trial opportunities for this non-traditional, innovative product will help turn this first-timers into loyal customers.

e) Public Relations

Public relations under IMC is an effort for positive media coverage with the publication of press releases on DryClean Tablets and their eco-benefits. Stories will be pitched to green lifestyle magazines, eco-friendly blogs, and other media outlets. More so, customer education programs should be implemented to inform consumers of the proper use of DryClean Tablets and their contribution to the environment. These are the programs that are going to share some tips, tutorials, and FAQs on the social networks, email newsletters, and websites. Email marketing will target potential buyers with special offers, updates on new scents or product variations, and tips on how to use DryClean Tablets effectively.

f) Pull Strategy

The pull strategy for DryClean Tablets will be aimed at using social media sites like Facebook, Instagram, and Twitter to develop exciting messages that major on convenience by the product and friendliness to the environment. In addition, targeted ads on these sites shall get the attention

of green consumers with a high sense of cleanliness and busy professionals. An even more important aspect will be influencer marketing by linking up with sustainable influencers and lifestyle bloggers, who can develop authentic content and testimonials about the benefits of DryClean Tablets so as to build credibility and grow the product's reach. Content marketing will entail a blog series on water saving, educational videos, and infographics about the damage caused by wet cleaning in the environment, and that DryClean Tablets offer an eco-friendly solution.

g) Push Strategy

The push strategy is going to be anchored in-store merchandising with retail partners complete with product demo and discounts aimed at increasing trial. Retailers would be provided with promotional materials, such as posters, shelf talkers, and display stands, so they have a better view of the product. Industry trade shows and environment-friendly activities will further expose the potential B2B clientele of DryClean Tablets in hotels, hospitals, and universities. Samples and demonstrations on these events will signify its advantages and push it towards adoption.

h) Ways and Measures to Ensure Effectiveness

To ensure the said strategies are effective, the company will provide a customer feedback loop that will encourage customers to review and give feedback on the company's website and social media pages, which in turn will be used to enhance the product. Referral scheme: Design the scheme to reward customers for their referrals to other friends and family in order to increase word-of-mouth marketing and customer loyalty. Run a series of seasonal campaigns built around key seasons and holidays to stress how DryClean Tablets save water and energy at peak laundry times, such as spring cleaning or back-to-school times. With these fully integrated strategies, DryClean Tablets can easily reach and convey a message to its target markets, which in turn contribute to the uptake of awareness, trial, and repeat purchases.

By implementing this comprehensive marketing mix, DryClean Pods can effectively reach and resonate with its target market, driving awareness, trial, and repeat purchases.

MAN 335
PROJECT SURVEY

Introducing DryClean Tablets

DryClean Tablets are innovative laundry tablets designed to clean clothes without using water. These tablets are specially formulated with a concentrated blend of enzymes, biodegradable solvents, and surfactants to remove dirt, stains, and odors. DryClean Tablets are added to the laundry in the dryer, providing effective cleaning without the need for water. The product comes in three different scent options: Lavender Breeze, Mountain Freshness, and Ocean Zephyr. These tablets are an eco-friendly and time-saving option, ideal for situations where water is scarce or traditional washing methods are impractical. DryClean Tablets are a perfect choice for environmentally conscious busy professionals.

There are 21 questions and 3 parts.

Thank you for your participation!

Part 1:

General Questions About Cleaning Products:

1. What factors are most important to you when choosing a cleaning product? (Rank in order of importance)
   - Cleaning effectiveness
   - Scent
   - Eco-friendliness
   - Convenience
   - Price
   - Brand reputation
   - Other (please specify): _____

2. How often do you use cleaning tablets?
- Daily
- Weekly
- Monthly
- Rarely
- Never

3. What type of cleaning products do you typically use? (Select all that apply)
- Liquid detergents
- Powder detergents
- Cleaning tablets
- Cleaning sprays
- Other (please specify): _____

4. Where do you usually purchase your cleaning products? (Select all that apply)
- Supermarkets
- Online stores
- Specialty stores
- Convenience stores
- Wholesale clubs
- Other (please specify): _____

Part 2:

Specific Questions About DryClean Tablets

5. How did you first hear about DryClean Tablets? (Select all that apply)
- Social media
- Online advertisement
- Friends/Family
- In-store display
- Magazine/Newspaper
- TV/Radio
- Other (please specify): _____

6. What was your initial reaction when you learned about DryClean Tablets?
- Very interested
- Somewhat interested
- Neutral
- Somewhat uninterested
- Not interested at all

7. What features or benefits would make you more likely to try DryClean Tablets? (Select all that apply)
- Cleaning effectiveness
- Eco-friendliness
- Convenience
- Price
- Brand reputation
- Scent
- Other (please specify): _____

8. Which scent of DryClean Tablets are you most interested in trying?
- Lavender Breeze
- Mountain Fresh
- Ocean Mist
- No preference

9. How likely are you to try a laundry product that does not require water?
- Very likely
- Likely
- Neutral
- Unlikely
- Very unlikely

10. In what situations would you find DryClean Tablets most useful? (Select all that apply)
- Everyday laundry
- Traveling
- Emergency situations (e.g., water shortage)
- Delicate fabrics
- When short on time
- Other (please specify): _____

11. Would you prefer a laundry tablet that can be used in both washing machines and dryers or one specifically designed for dryers?
- Both washing machines and dryers
- Only dryers
- No preference

12. How important is the eco-friendliness of a laundry product to you?
- Very important
- Important
- Neutral
- Unimportant
- Very unimportant

13. How much more would you be willing to pay for DryClean Tablets?
- 0% more (same price)
- 1-10% more
- 11-20% more
- 21-30% more
- More than 30% more

14. Where do you expect to get the tablet product? (Select all that apply)
- Supermarkets
- Online stores
- Specialty stores
- Convenience stores
- Wholesale clubs
- Other (please specify): _____

15. How likely are you to switch from your current laundry detergent to DryClean Tablets if you find them effective?
- Very likely
- Likely
- Neutral
- Unlikely
- Very unlikely

16. What concerns, if any, do you have about using a laundry product that does not require water?
- Effectiveness
- Safety

- Scent
- Price
- Availability
- Other (please specify): _____

17. Please share any additional comments or feedback about DryClean Tablets:
-

18. Would you recommend DryClean Tablets to friends or family based on what you know?
- Yes
- No
- Maybe

Part 3:

Demographic Questions:

19. What is your age?
- Under 18
- 18-24
- 25-34
- 35-44
- 45-54
- 55-64
- 65+

20. What is your gender?
- Male
- Female
- Non-binary
- Prefer not to say

21. What is your household income?
- Under 25000 TL
- 25000 - 50000 TL
- 50001 - 75000 TL
- 75001 - 100000 TL
- Over 100000 TL

- Prefer not to say
